

Atlas Heatworks 2025 Impact Report

Reporting period: 1 January–31 December 2025 · Issued 20 March 2026

Fictional demonstration document. Figures are internally generated estimates and are not independently audited.

Executive summary

Atlas Heatworks commissioned 428 Aster systems during 2025 across Alder County. The installed fleet comprised 265 Aster 8 systems (62 percent) and 163 Aster 12 systems (38 percent). Using Atlas's published baseline methodology, those installations are estimated to avoid 1,840 tonnes of carbon-dioxide equivalent over their first full operating year compared with the replaced heating systems.

Key indicators

Indicator	2025 result	Context
Systems commissioned	428	265 Aster 8; 163 Aster 12
Estimated first-year emissions avoided	1,840 tCO ₂ e	Modelled, not audited
Recovered refrigerant sent for reclamation	96%	By mass from service returns
CarePlus registrations on time	89%	Within 30 days of commissioning
BrightHome Access Fund installations	37	Income-qualified households
Installer recertification completion	100%	All 24 field installers

Supply chain and service operations

Norrby Climate Systems manufactured every Aster 8 and Aster 12 outdoor unit commissioned by Atlas in 2025. Atlas retained installation, commissioning, customer support, and annual maintenance responsibility. East Yard completed 54 percent of field service visits and West Yard completed 46 percent.

Community access

The BrightHome Access Fund supported 37 of the year's 428 installations. The fund received one percent of 2025 installation revenue and was administered by the Community Programs team. Grant eligibility did not change product selection, commissioning, warranty, or CarePlus requirements.

Method and limitations

Avoided-emissions estimates compare declared pre-installation fuel use with modelled electricity consumption under a standard weather year. They are portfolio estimates, not guarantees for an individual building. Refrigerant reclamation is calculated from contractor transfer records. The report contains no customer-level data.
